TITLE: Blanket for wet section of a paper-making machine - has
a three dimensional knitted layer over the woven base
layer

INVENTOR: PENVEN, P

PATENT-ASSIGNEE: COFPA CIE FEUTRES PAPETERIES[COFPN]

PRIORITY-DATA: 1994FR-0014098 (November 24, 1994)

INT-CL (IPC): D21F007/08

ABSTRACTED-PUB-NO: FR 2727442A

BASIC-ABSTRACT:

The blanket, for the wet section of a papermaking machine, has a woven base (1) and a superimposed knitted structure (4), covered by a non-woven layer (7), with needle bonding to hold the layers together. The knitted layer (4) is a three-dimensional structure with two parallel knitted surfaces (41, 42) parallel to the base layer (1). The surfaces (41, 42) are joined by yarns (43) at right angles to them.

Pref. the woven base layer (1) has warps (2) and wefts (3) of polyamide. The knitted layer (4) is e.g. of polyamide, polyester, polyether ether ketone, etc

ADVANTAGE - The blanket has high flexibility and compression, with improved water extraction and retention, with good permeability for water delivery at the suction systems. It gives smooth running without adhesion of pulp clumps.
